DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-52 and 64-65, drawn to method for crystallizing requiring irradiation, classified in class 438, subclass 487.
 - II. Claims 53-63, drawn to a system for processing a thin film under the control of a computer program, classified in class 118, subclass 715.
2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be performed by hand. For example, controlling the power to the irradiation beam can be performed by a human operator by turning the irradiation beam on and off by hand.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
